Sustainable Recycling Industries
Component A: Life Cycle Inventories

Invitation to tender for LCI data collection and submission to ecoinvent Centre

July 2016
Zurich
28.07.2016

Call for Tenders

for Life Cycle Inventory (LCI) data collection, LCI dataset creation and submission to ecoinvent

This is an open invitation for tender.

1. Background & project description ......................................................................................... 3

14. Submission procedure ......................................................................................................... 10
1. Background & project description

**ecoinvent** is the world’s leading supplier of consistent and transparent LCI data of renowned quality. ecoinvent is a proud partner of the Sustainable Recycling Industries (SRI) programme, a programme funded by the Swiss State Secretariat for Economic Affairs (SECO) and jointly implemented by the Swiss Institute for Materials Science & Technology (**Empa**), the World Resources Forum (**WRF**) and ecoinvent, through three interconnected programme components:

Component A - Life Cycle Inventories: SRI gathers and provides local LCI data for the assessment of agricultural and industrial activities through the enhancement of local and regional LCA expertise with the aim to provide freely available regionalized LCI data for India, Latin America, and South Africa.

Component B - Recycling Initiatives: SRI improves local capacity for sustainable recycling activities together with private and public institutions, as well as the informal sector in a number of partner countries (Peru, Colombia, Ghana, Egypt, India)

Component C - SRI Roundtable: SRI facilitates a stakeholder consultation for the development of sustainability criteria for secondary raw materials

ecoinvent is in charge of component A of the SRI project.

Through this call ecoinvent aims to subcontract the task of LCI data collection, dataset creation and submission to the ecoinvent database.

2. Eligibility Criteria

Proposals can be submitted by public and/or private entities which are eligible according to their respective national/regional regulations, such as, but not limited to higher education institutions, public research institutes, private research institutes, companies, etc.

Tender shall come from an institution based in South Africa, or a partnership of institutions (consortium) including at least one 1 eligible partner from South Africa. In case of a consortium, at least 80% of the budget shall be assigned to the institutions(s) based in South Africa. The number of project partners should be reasonably balanced to correspond to the aims, duration and deliverables of the project.

No subcontracting of tasks to external institutions is permitted.

3. Task description

The tender shall provide LCI data to update existing datasets—and if required provide new LCI datasets—related to the key current and future electricity generation technologies and to coal mining in South Africa. The tender shall submit the updated/constructed datasets to ecoinvent through appropriate means as explained in this call for tender.
To do so, the tender shall collect LCI data as well as information necessary for allocation, construct datasets in the form of unallocated unit process (UPR) activities, validate the constructed datasets to ensure consistency and compliancy with the ecoinvent version 3 quality guidelines, document these datasets, submit them to ecoinvent v3 database by employing the free ecoEditor software, and apply the corrections required by editors and reviewers organized by ecoinvent until the acceptance of the datasets by the ecoinvent in the form of publication in a release of the ecoinvent database. The data collection activities shall be carried out according to the scope (type of sector and geography) of this call for tender, as shown in Table 1.

Table 1: Scope of required LCI data

<td></td>
</tr>
<tr>
<td>- current and future electricity generation in South Africa by Concentrated Solar Power (CSP) power plants, including “Power tower” and “Parabolic Trough” CSP technologies</td>
<td></td>
</tr>
<tr>
<td>- information required to create Market datasets for electricity supply and distribution, as well as coal in South Africa</td>
<td></td>
</tr>
</tbody>
</table>

The data provider shall report to and collaborate with the ecoinvent management and respective editors during different phases of the project.

A more detailed task description includes:

a. **Data collection**

   - Acquiring data, which are needed for the creation of datasets in the form of unallocated unit process activity (UPR), through appropriate and coherent means, such as field measurements, interviews, questionnaires, literature research, estimations or calculations, for the sectorial data detailed in Table 1. The data represents the information required to create transforming datasets\(^1\) (LCI data), as well as Market datasets. The data

---

\(^1\) A market dataset collects all activities with the same reference product in a certain geographical region. Furthermore, it includes average transports of that product within the geography, as well as inputs of the product itself to cover losses in trade and transport. In other words, they are consumption mixes of a certain product in a
a. Ecoinvent database version 3.

b. **LCI datasets creation and entry to ecoEditor**

- Using the collected data, construct datasets in the form of UPR activities or update the existing datasets in ecoinvent. More specifically, the tenderer(s) shall
  
  - Provide new datasets representing the production (mining, processing and transportation during production) of “hard coal” to produce high- and low-quality coal in South Africa
  
  - Update the existing dataset in ecoinvent database related to electricity generation by coal technologies in South Africa, with more recent and regionalized data/information on key emissions and efficiency parameters from coal power-plants operating in region. The list of related existing datasets in ecoinvent database are provided in Appendix B.
  
  - Provide the information to create and update the Market datasets for coal and electricity supply and distribution in South Africa, namely information on average transportation distances, warehousing, transportation, and trade losses.
  
  - Create new datasets representing future electricity generation in South Africa using High Efficiency, Low Emissions (HELE) coal combustion units, namely Super Critical (SC) and Ultra-Super Critical (USC) units (to be commissioned Medupi and Kusile coal power plants).
  
  - Create new datasets representing current and future electricity generation in South Africa using Concentrated Solar Power (CSP) power plants, including “Power Tower” and “Parabolic Trough” CSP technologies. Since such technologies are not yet documented in the ecoinvent database, the tenderer shall also provide infrastructure datasets representing the construction of CSP systems.

The dataset creation has to conform to the instructions provided in the ecoinvent Data Quality Guidelines of version 3 and the submitted datasets shall integrate with and build on top of the existing ecoinvent database.

The structure of the submitted electricity datasets shall conform to the existing structure of Life Cycle Inventories of electricity generation and power supply in version 3 of the ecoinvent database.

---

2 For more information on the structure of LCI datasets of electricity generation and power supply in version 3 of the ecoinvent database, please refer to the following documents:

Existing ecoinvent datasets representing the electricity/coal production and supply in South Africa may serve as starting point or template for the creation of new datasets. The list of related existing datasets in ecoinvent database are provided in Appendix B.

- Enter the created datasets in the ecoEditor tool, i.e. the tool to create, edit, review and upload datasets for the ecoinvent database, to create LCI datasets in ecoSpold 2 format. The software "ecoEditor for ecoinvent version 3" is free to use and can be downloaded from the ecoinvent website.

c. **Datasets validation: compliancy and consistency**
   - Run the off-line and on-line validation checks of datasets created in ecoEditor software, using the respective functions of the software, according to the instructions provided in chapter 12 (Validation and review) of Data Quality Guidelines of ecoinvent version 3.
   - Perform an internal review of the created datasets to ensure comprehensiveness, adherence to the quality guidelines (compliancy with ecoinvent version 3), consistency with similar activities in other geographies or using similar technologies, and to eliminate data entry errors.

d. **LCI datasets documentation**
   - Document the datasets to be compliant with the ecoinvent “good practice for documentation”, as described in section 7 of the Data Quality Guidelines for the ecoinvent database version 3.

e. **LCI dataset submission and integration into ecoinvent database**
   - Gather the necessary information for submission according to the Data Quality Guidelines of ecoinvent database version 3, and submit the UPR datasets to ecoinvent by using the ecoEditor. The submission process has to be done according to the procedure detailed in Data Quality Guidelines of ecoinvent database version 3.
   - Upon receiving the feedback from the ecoinvent editors as well as its external and the technical reviewers, apply for the corrections required by the editors until the final acceptance of the datasets by the ecoinvent. This is an iterative process, and it is concluded when Life Cycle Impact Assessment (LCIA) results are checked and approved by the data provider as well as ecoinvent and the datasets are published in a release of the ecoinvent database.

4. **List of deliverables**

A. A set of LCI datasets, in UPR format, which has been constructed, documented and reviewed according to the quality requirements of ecoinvent version 3, submitted to ecoinvent, and passed the review and validation phase of ecoinvent management and its editors to be published in a release of the ecoinvent database. The datasets shall conform to the scope (type of sector and geography) shown in Table 1.

B. Information required to create upstream (downstream) Market datasets which supply (receive output from) the above datasets

The datasets and the related documentation shall be provided in English language.
5. Support during project implementation

Ecoinvent management and its editors, who will be selected based on the type and sector of the LCI data, will provide support and guidance to a certain extent during different phases of data collection, dataset creation, review and submission processes. Table 2 demonstrates the supporting role of ecoinvent management and its editors in different phases of data collection and submission to ecoinvent.

</tbody>
</table>

6. Reporting procedure

The project implementer shall report to ecoinvent, through appropriate means such as telephone conversation or written documents, the status and progress of the project according to the original plan of action submitted along with the proposal.
7. Transfer of rights and acknowledgements

During the data submission process, data providers shall grant ecoinvent the non-exclusive right to use the datasets. All copyrights to the submitted data remain with the authors of the dataset. The exact text of this agreement follows:

"I confirm to hold the copyright to the uploaded data and to be entitled to dispose of these copyrights. I hereby transfer the non-exclusive right of use of the uploaded data to the ecoinvent Centre for publication in the ecoinvent database, including but not limited to the right to publish, republish, transmit, sell, distribute, modify, change, complete and otherwise use the contributed dataset in electronic and print form and in derivative works throughout the world, in all languages, and to license or permit others to do so. This transfer of non-exclusive right of use cannot be withdrawn without a full payment of compensation to the ecoinvent Center to cover damages or a replacement of the withdrawn data. I maintain the right to use the transferred data for my own scientific work as well as to use it with third parties on a non-exclusive basis, including for commercial purposes."

In addition, the funding and supporting institutions in collecting the LCI data and preparing the datasets shall be acknowledged.

8. Schedule and timeframe

It is considered as a bonus (see evaluation criteria) if the data collection and submission can be committed to be finalized within 9 months since the start of the project. The tenderers shall provide a precise schedule according to which they would start and finalize each of the tasks described in the “Task Description” section of this call for tender.

Within one month of the start of the project, the data provider shall submit to ecoinvent the updated list of data to be collected and datasets to be developed. This list shall include all the datasets included in the original proposal for the call for tender, as well as any related datasets that will be required to be submitted along with the datasets in the proposal, in order to make the submission version 3-compliant.

Furthermore, early commencement of datasets submission to ecoinvent—e.g. within three months of the start of the project—to allow for a prompt review procedure by the ecoinvent centre and its reviewers, is highly valued.

9. Budget

The funding ceiling to carry out the subcontracted tasks is limited to CHF 35’000 (thirty five thousand Swiss Francs), including any applicable VAT. The budget shall include all costs, including personnel and operational costs to carry out the project. The contract will be issued in CHF.

10. Application
Interested tenderer(s) shall provide a list of LCI datasets they propose to submit—accompanied by a short description of the main features/contents of datasets and their divergence from similar existing datasets in Appendix B—as well as the estimated time (in terms of hours) to create and submit each batch of datasets. The tenderers shall also indicate in the proposal the different proposed activities to realize the aims of this tender, namely the methodology/strategy employed to collect LCI data for updating/creating the submitted datasets. Such information shall be provided to ecoinvent by filling-in the Table A.1 provided in the Appendix A of this call for tender. The tenderers shall also indicate in the proposal the required budget to carry out the LCI data collection and delivery.

In addition, the tenderer(s) must demonstrate that they possess the resources and thus are competitive enough to fulfil the aforementioned project. The tenders shall provide the name and CV of all the key persons who will participate in different tasks of the data collection project, along with their expertise level, estimated time devoted to the project, and their respective charging fee (per day).

It is considered a bonus the tender offers to complete the project within less than 9 months of the start of the project, and an extra bonus if tenderer’s offer is significantly below the budget ceiling (35'000 CHF).

11. Evaluation

Step 1: Eligibility validation

Ecoinvent will assess the eligibility of the received proposals according to the following criteria:

- applying institution and composition of the consortiums (institution(s) from South Africa, or least one partner from South Africa, with 80% of the budget being allotted to South African institute(s)).
- all required information is correctly provided

Step 2: Assessment

The assessment to select the project partner(s) will be based on the following criteria:

Expertise and experience of the institution or combination of institutions (50%)

- demonstrated knowledge and expertise in the sector detailed in Table 1 of this call for tender (Min=1, Max=15)
- experience in LCA and in LCI data collection activities, specifically related to the activities/sectors detailed in Table 1 (Min=1, Max=10)
- experience in working with ecoinvent version 3, the LCI data preparation to create LCI datasets according to ecoinvent Data Quality Guidelines v3, and the submission process to ecoinvent version 3, using the ecoEditor tool (Min=1, Max=5)

List and quality of proposed deliverables (50%)
- type, quality, and quantity of the LCI data the tender would commit to submit to ecoinvent database, which shall be related to sectors listed in Table 1 (Min=1, Max=10)
- a timetable that presents the plan according to which the tender intends to deliver each type of dataset (or batch of datasets), with speedier delivery being considered a bonus (Min=1, Max=5)
- integratability of the LCI data/datasets with the existing structure and data in the ecoinvent database (Min=1, Max=10)
- required budget to carry out the proposed project, with offers significantly below the maximum offer (35’000 CHF) being rewarded extra points up to the maximum for free offers (Min=1, Max=5)

12. Question and answer period

A question and answer period is envisaged for interested parties to submit questions related to the preparation and submission of the full proposal. All such inquiries and technical questions shall be directed to Amir Safaei via email: safaei@ecoinvent.org. The deadline to register your questions is 7th of August 2016.

13. Closing date for proposal submissions

17th of August 2016

14. Submission procedure

Tenderers shall submit tenders by email to safaei@ecoinvent.org before the closing date for proposal submission indicated above.

The evaluation will be performed within two weeks of the deadline for tender and the bidders will be informed immediately. The draft contract will be issued within 2 weeks after the selection of the successful bidder and work has to start within one week after the signature of the contract. In case of any questions, please contact Amir Safaei at safaei@ecoinvent.org.
